

Phu Nguyen

For this lab I went through the notebook in order and ran the code myself so I could see what each part was doing. We loaded the Titanic data, checked it with `.info()` and `.describe()`, and made the plots for survival, class, gender, and age.

For the two experiments and the knowledge check questions, I got help from Google Colab assistance. After that I ran the code, looked at my own plots, and wrote the answers so they made sense to me.

This lab made me see why you look at the data before building anything. The graphs showed me things the numbers didn't, like the outliers in Fare and the bump of kids who survived. When I finished, I uploaded it to my GitHub repo and submitted it.

For this lab, I took responsibility for doing the data exploration tasks, fixing broken code cells, and preparing all my final submission files. I started by opening the notebook in Google Colab, importing the Titanic dataset directly from GitHub using pandas, and running the head and info commands to make sure all the data columns and data types loaded properly.

Next, I worked through the experimentation section step by step. I wrote the code for a seaborn count plot to compare survival rates based on where passengers boarded the ship and then created a boxplot to look at the relationship between fare prices and survival outcomes. During this step, I also identified and fixed syntax errors in cells 16 and 27 by separating lines of code that had collapsed into single lines. Once the code was fixed, both visualizations generated without any issues.

Finally, I thoroughly tested the notebook using the restart and ran all options to confirm that every cell executed cleanly from top to bottom. Once everything was verified, I printed the complete notebook as a PDF to ensure all code, text outputs, and graphs were clearly visible. I then wrote my reflection and contribution journals, saved them both as separate PDF documents, and double-checked that all three files followed the required naming convention for our group submission.
