

Phu Nguyen

For this lab I went through the notebook in order and ran the code myself so I could see what each part was doing. We loaded the Titanic data, checked it with `.info()` and `.describe()`, and made the plots for survival, class, gender, and age.

For the two experiments and the knowledge check questions, I got help from Google Colab assistance. After that I ran the code, looked at my own plots, and wrote the answers so they made sense to me.

This lab made me see why you look at the data before building anything. The graphs showed me things the numbers didn't, like the outliers in Fare and the bump of kids who survived. When I finished, I uploaded it to my GitHub repo and submitted it.
